

Quality Management System - Policy Statement

Guttridge provide high quality bulk solids handling solutions for customers around the world.

With generations of history, experience and continuous investment in people, equipment and skills, Guttridge design, manufacture, commission and service bulk solid handling solutions and components for customers. As Laserfab, we manufacture subcontract components to customer specifications and design.

Goods and services are sold to companies within bulk material handling and general industrial markets for a range of specialist applications.

Our offerings are defined by the knowledge and application of our people and subsequent translation of customers' needs into value creating solutions. This is achieved through the complete system understanding of products, controls and application capabilities.

We are committed to continuous improvement and have established a Quality Management System which provides a framework for continuously measuring and improving quality performance, underpinned by certification to meet the internationally recognised ISO 9001 standard and which additionally meets the Quality Assurance requirements of both the European ATEX Directive (2014/34/EU) and BS EN ISO 80079:34. We maintain our commitment to ensure our products intended for use in potentially explosive areas will be in conformity with the certificates issued by the Notified Body.

On behalf of Guttridge Limited

Steve Wade
